

## Clinical Psychology Assessment and Consultation Services

**Service Objectives and Scope:** We aim to utilize clinical psychological assessments and consultation services to support parents in understanding their children’s abilities and needs, to enhance children’s adjustment, self-efficacy and problem solving abilities in emotional, social and academic domains, to improve parent-child relationships, and to assist with application or referrals to relevant services (eg: preschool rehabilitation service, exam accommodations) based on children’s needs.

**Target Service User:** Children, adolescents and adults suspected of having special educational needs, such as Developmental Delay, Autism Spectrum Disorder, Attention Deficit/Hyperactivity Disorder, giftedness, emotional and behavioural difficulties, and other conditions.

**Examiner:** Clinical assessments and professional reports will be completed by Clinical Psychologists (registered users of assessment tools/members of the Division of Clinical Psychology, Hong Kong Psychological Society).

### Services Provided:

The following assessments are conducted in English, with tests suitable for English-speaking individuals. For assessments conducted in Cantonese, please refer to the Chinese language Clinical Psychology service list.
